Rafael Escobar

I'm a programmer currently living in Brazil with focus on backend development and also interested in Computing Science. I'm currently in love with Rust and Go, but I always loved the experience of trying new languages and paradigms.

Work Experience

Typescript / Node.js Programmer @ Grover

Berlin, Germany / remote — Oct 2021 - current

Grover is a renting service for all tech-related items. As a Software Engineer, starting from mid level (L5) and promoted to senior (L6), I am part of the payments team (in a microservice environment), dealing with integrations with payment providers, payment method management, billing scheduling, and other similar functionalities in the system. I'm currently focused in our backend services, jobs and databases, but sometimes I participate in other things, including frontend development, participation in different teams' projects, Kubernetes configuration, infra management, etc. Our codebase includes mainly Typescript, but some legacy projects were made with Ruby and vanilla JS. For persistence, PostgreSQL and Redis. All of the infrastructure is in AWS (EKS, RDS, Elasticache, etc.), managed via Terraform.

Go Programmer @ Red Ventures

São Paulo, Brazil — Jun 2017 - Sep 2021

Also starting from mid level and promoted to senior. Our team took care of the whole application server-side: the database modeling, the architecture, the cloud infrastructure, etc. Usually, the services were made with Go, but sometimes we used Node.js. For persistence, MySQL and Redis. The cloud infrastructure was also entirely AWS (ECS, CloudFront, S3, RDS, Elasticache, Lambda, etc.) and managed via Terraform.

Projects
Onze: Onze was a new fintech focused on private pensions, which is the first 100% online in Brazil. This project required a lot of integrations, including the insurer, a digital signature service, a money laundering validation service, and many others.
IQ: A startup that automates bills payments. In practice, it was lots of jobs communicating with different platforms, via APIs or headless browser automation. Probably, the one with the most complex architecture.
Capital Research: A simple project of a free financial publishing consultancy platform.

.NET Programmer @ BRQ

São Paulo, Brazil — Apr 2015 - May 2017

At BRQ, I used to work mainly with ASP.NET MVC, C# and MS SQL Server, but some projects required VB, Web Forms and Oracle. Most clients were huge companies and big banks and the job usually consisted on legacy code maintenance.

Technical Support @ FIAP

São Paulo, Brazil — Feb 2013 - Apr 2015

Technical support for students and employees of the college, assistance during classes, and computers' maintenance during breaks and vacations.

Skills

Dev

TS/JS, Node.js, Go, Rust, C#

API

REST, GraphQL

Persistence

PostgreSQL, MySQL, MongoDB, Redis

Ops

Docker, AWS, Linux, Shell

Coding

Testing, DDD, TDD, OOP, FP

Frontend

JS, React, preprocessors

Education

Information Systems BSc @ FIAP

São Paulo, Brazil — 2014 - 2017

Languages

Portuguese
